SUMMARY

Backend and Flutter developer working primarily with Go, REST APIs, and PostgreSQL. Builds practical backend systems and mobile applications, with hands-on experience in authentication, authorization, database integration, and API development.

TECHNICAL SKILLS

Languages: Go, Dart, SQL

Backend: REST APIs, HTTP, Routing, JWT

Databases: PostgreSQL, MongoDB

Frameworks & Libraries: Chi, Flutter

Tools & Services: Git, GitHub, Docker, Cloudinary

PROJECTS

ReportIt | Go, Flutter, PostgreSQL, Cloudinary

A community complaint management mobile application built with Flutter, Go, and PostgreSQL.

- Built a Flutter mobile app backed by a Go REST API and PostgreSQL for complaint submission, tracking, and management, including an admin dashboard for status and user management.
- Implemented access and refresh token authentication with database-backed refresh token storage, rotation, and role-based authorization middleware.
- Structured the Go backend using handler, service, and repository layers, with request validation, password hashing, and structured logging via slog.
- Integrated Cloudinary for image uploads and Google Maps for selecting complaint locations.

Event Ticketing API | Go, PostgreSQL

A REST API for managing events and ticket bookings using Go and PostgreSQL.

- Built REST APIs for event creation, updating, deletion, filtering, and paginated retrieval using Go and PostgreSQL.
- Implemented ticket booking and cancellation with PostgreSQL transactions, checking seat availability and creating bookings atomically for capacity management.
- Added request validation and consistent JSON response and error handling across API endpoints.
